SUMMARY

I am a fourth-year Ph.D. candidate in the Department of Physics at Northeastern University and a junior researcher at the NSF Institute for Artificial Intelligence and Fundamental Interactions (IAIFI). My research interests broadly lie at the intersection of machine learning and cosmology, with a particular focus on particle cosmology and weak gravitational lensing, where I utilize techniques such as differentiable programming/simulations and ML-accelerated Bayesian inference. Prior to pursuing my Ph.D., I applied machine learning techniques to astrophysical problems, including the estimation of supermassive black hole masses.
